 \mathbf{Q}

A matrix of hot glass is stretched and folded back onto itself numerous times as it cools. Air is trapped between the folds and stretched along the grain of the loop, creating microfilaments that give the piece a pearlescent optical quality. A light source is introduced at one end of the loop casting light through the microfilaments and registering a gentle gradient.

87 Series

±300-500 mm

Lamping

1w LED or 10w xenon

Material

Pulled glass, braided metal coaxial cable, electrical components, and brushed nickel or white powder coated canopy.

Patent

Worldwide patents pending EU Patent # 03611144 - 0005-0009

±115-240 mm
